  Document retrieval using elastic search and search tree (trie).
  Sentence similarity using BERT.
  Inference using multi-task modelling with adversarial training.

- **Content Quality**
  Machine learning models for identification of hate speech, hyper-partisanship, logical-fallacy.

- **Echo Chambers** (biases people to read only one side of a story)
  Stance detection using a multi-task model to distinguish favourable and opposing opinions about
  a debatable issue.

- **Natural Language Processing**   2017-2018
  Question answering system (BiDAF, QANet and RNet) to extract snippets of text which
  are relevant to a claim in fact-checking pipeline.
  Neural question generation to convert a claim into question that can be used as a search
  query to enhance the coverage and relevance.
  Claim-extraction using **abstractive summarization** and sentence ranking techniques.
